ROAD ANGEL Fleet
authorised dealer

The Road Angel Fleet management solutions use GPS/GSM technologies to assist businesses to reduce their overheads and be more efficient in managing driver and vehicle assets.

Road Angel Fleet automates the collection of mileage data for each monitored vehicle, taking the pain out of managing maintenance schedules, vehicle end of warranty dates, MOT and Road Fund Licence renewals, reducing overheads and freeing resources.

By monitoring vehicle location and recording journey data, our systems offer cost benefits through enhanced driver productivity, reduced overtime claims and effective monitoring of out-of-hours usage, whilst delivering on employers duty of care requirements.

All units are supplied in an IP-rated, waterproofed box, ready to be fitted in any vehicle. Units can be quickly and easily connected by our network of approved installers. The system operates using GSM, GPRS and GPS systems to provide the measurement, reporting and vehicle location information. No additional hardware or software needs to be installed as the units connect wirelessly to the secure Road Angel Fleet Web portal.

"Custodia systems provide an excellent product and more so an excellent service. The tracking units are a necessity in our car hire business and finding competitively priced units with a live subscription and as an advanced product as theirs is difficult to find. Our recommendation comes with firm integrity and honesty. If you don't believe us, simply ask for a demonstration and see for yourself!"

Ismail Mayat, Business Manager

☀ **REDUCE YOUR STAFF COSTS:**

"The system has been a real eye opener to what really goes on with our fleet. We have complete visibility on what hours are worked, and in particular what employees are doing when overtime is being claimed. For example, we used to pay a large amount of overtime for drivers stuck in traffic 'traveling' to London. Using the system, we have been able to make minor changes to the journey start times which have resulted in far better utilisation of the engineers time, and more profitability for us. We have even been able to discover a 'problem' employee who otherwise would have been undetected. There is no doubt the system paid for itself in a very short period of time"

Robin Riley, MD (Pure Air Conditioning Ltd)

☀ **SCHEDULING AND EFFICIENCY:**

"Custodia Systems have enabled us to manage our business more effectively. We have complex delivery schedules with our drivers going to over 2,000 destinations across the UK delivering high-end furniture. We have found fuel savings by improving the efficiency of our routes, not just for transport, but also for our sales team. We have also identified issues with a couple of members of staff that we really had no idea were causing a problem. We have been able to manage our customers expectations better and deliver an even higher level of service. I'm very confident that we'll get a complete return on investment within 6 months."

Jon Harrison, Director (Harrison Brothers)

☀ **LEGAL ISSUE MANAGEMENT:**

"The system has saved us so much money through efficiency and overtime savings. However, our main motivation in taking the system was to ensure we were compliant with various new legislation that has affected our business. For example, we are able to manage our drivers working hours and that they are driving their vehicles to the letter of the law. We also use the servicing reports to insure that our fleet is well serviced and managed to ensure lack of maintenance could not put the drivers and business at risk."

Rocky Duggal, Development Director (Chilled Express)

☀ **COMPLY WITH BENEFIT IN KIND LEGISLATION:**

"We have a fleet of 60 transit sized vans. We were concerned about the excessive administration caused by the new benefit in kind tax and this was our main motivation in buying a tracking system. Custodia Systems provided a low cost solution backed by one of the major fleet technology companies - Road Angel. We were particularly attracted to the three years subscription included in the purchase price. Keeping an eye on hours worked and overtime has been an unexpected bonus."

Matt Brown - Financial Controller, Durnham Stearn
